Rotary indexing tables DHTG

FESTO

New

Rotary indexing tables DHTG

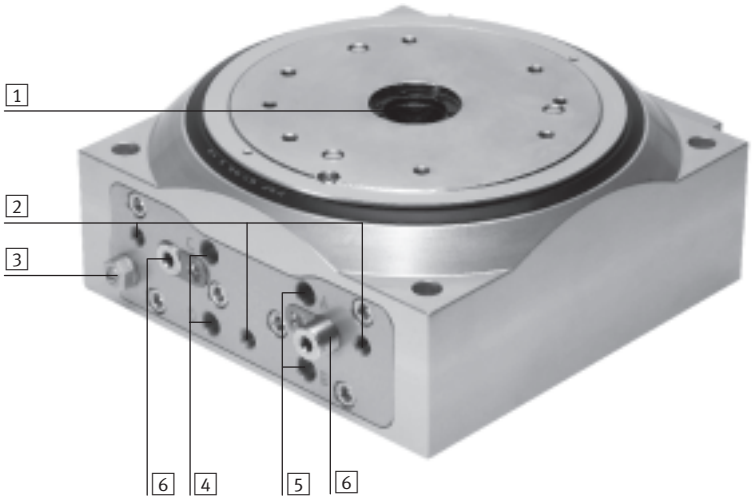
Key features

At a glance

- Robust mechanics
- Simple planning and commissioning
- Number of stations: 2, 3, 4, 6, 8, 12, 24
- Smooth motion sequence, almost sinusoidal acceleration behaviour
- Control options:
  - Anti-clockwise
  - Clockwise
  - Reciprocating motion
- Integrated functions:
  - Overload protection
  - Sensor function
  - Cushioning adjustment
  - Speed setting
  - Changing the direction of rotation

The technology in detail

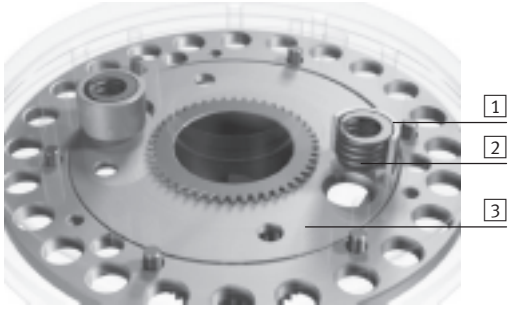
1 Through-hole for energy throughfeed
2 Thread for position sensing
3 One-way flow control valve for regulating speed
4 Supply port for reciprocating operation
5 Supply port for clockwise or anti-clockwise rotation
6 Adjusting screw for cushioning adjustment



Overload protection

To prevent the rotary indexing table from being damaged by an excessive mass moment of inertia, e.g. during setting operation or in the event of shock absorber failure, sizes 140 and 220 feature overload protection.
If the mass moment of inertia is too large, the securing pin is pressed against the spring force by the resulting radial force. It then slides forward on the toothed segment. This shift in position between the index plate and toothed segment means that the securing pin can no longer engage and the rotary indexing table does not move. The table can be made ready for use again by turning it back.

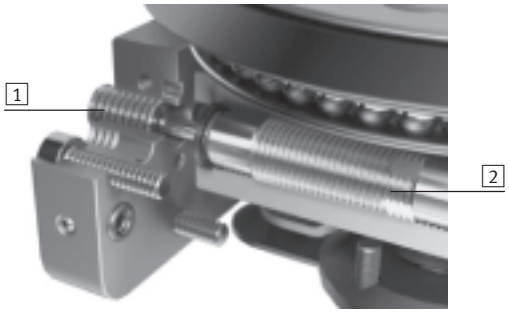
1 Securing pin
2 Spring
3 Toothed segment



Cushioning adjustment

The rotary indexing tables are equipped with a hydraulic shock absorber. The cushioning characteristics can be adjusted using the stop. This is carried out on the front side.

1 Stop screw
2 Shock absorber



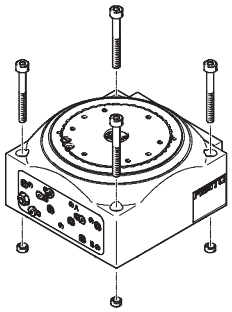
Rotary indexing tables DHTG

Key features

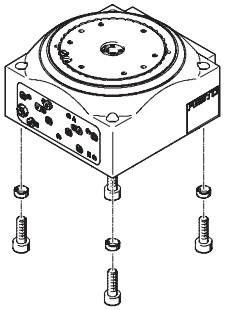
FESTO

Mounting options

Direct mounting from above



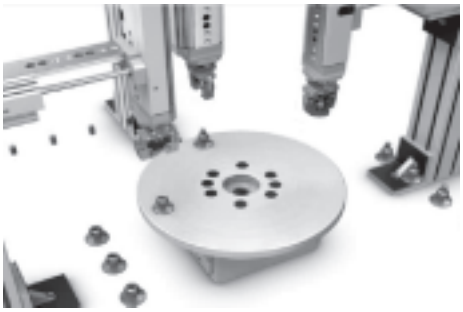
Direct mounting from below



Typical applications

Basic rotary table

- Handling with minimum space requirement



Rotary table with rotary distributor

- For the transfer of compressed air and vacuum to the rotary table
- With 1 or 2 separate ducts

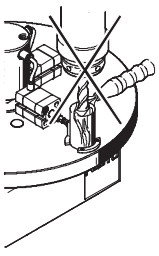
Rotary table with stationary centre section

- For the mounting of handling units or other devices in the centre of the rotary indexing table

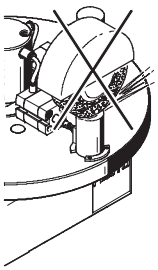
Note

The rotary indexing tables are not designed for the following or similar sample applications:

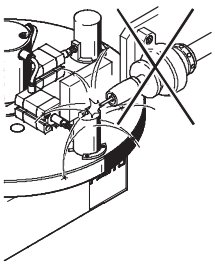
- Machining
- Aggressive media



- Grinding dust



- Welding spatter



Rotary indexing tables DHTG

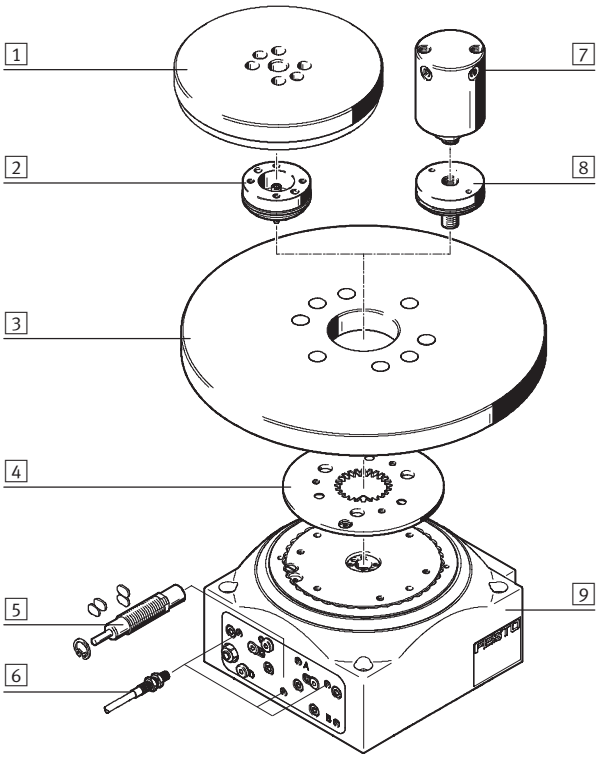
Peripherals overview



Variants and accessories

	Type	Brief description	➔ Page/Internet
1	Unmachined plate, fixed DADG-UPF	For the mounting of handling units or other devices in the centre of the rotary indexing table	14
2	Adapter kit DADG-AK	For mounting the unmachined plate DADG-UPF on the rotary table	15
3	Unmachined plate, rotating DADG-UPT	Actuators can, depending on the application, be mounted on the unmachined rotating plate	14
4	Indexing conversion kit DADM-CK	The indexing steps can be adjusted at any time using the kit	18
5	Reciprocating motion kit DADM-TK	Allows conversion from movement in one direction to reciprocating movement	18
6	Proximity sensors SIEN	For sensing the switching position of the rotary indexing table	18
7	Rotary distributor GF	Distributes the compressed air conducted through the centre of the rotary indexing table to the actuators on the unmachined rotating plate. Cannot be used in combination with the fixed unmachined plate DADG-UPF	16
8	Adapter kit DADG-AK-...-...G...	For mounting the rotary distributor on the rotary indexing table	17
9	Rotary indexing table DHTG	Flexible range of applications: Anti-clockwise and clockwise rotation or reciprocating motion	6

Size		65	90	140	220
Pneumatic connection		M5		G1⁄8	
Design		Gear coupling			
		Rack and pinion			
		Force-guided motion sequence			
Mode of operation		Double-acting			
Type of mounting		Via through-holes and centring sleeve			
Mounting position		Any			
Cushioning		Adjustable shock absorber stroke, hard characteristic curve			
Indexing stations		2, 3, 4, 6, 8, 12, 24		3, 4, 6, 8, 12, 24	
Torque at 6 bar	[Nm]	2.1	4.4	18.1	58.9
Parallelism of plate[1)]	[mm]	≤ 0.04			
Axial eccentricity of plate[2)]	[mm]	≤ 0.02			
Concentricity of plate[3)]	[mm]	≤ 0.02			
Repetition accuracy of swivel angle	[°]	≤ 0.03			
Max. mass moment of inertia without flow control	[kgm^2]	0.016	0.03	0.3	2.5
Cycle time		→ 8			
Position sensing		For inductive proximity sensors			
Product weight	[kg]	2.0	4.5	10	24

1) Parallelism of the upper plate surface relative to the housing support
2) Measured on the upper surface of the plate at the plate edge relative to the housing support
3) Measured on the internal diameter of the plate relative to the housing

Operating and environmental conditions		
Operating medium		Filtered compressed air, grade of filtration 40 µm, lubricated or unlubricated
Operating pressure	[bar]	4 ... 8
Ambient temperature	[°C]	5 ... 60
Storage temperature	[°C]	–20 ... +80
Protection class		IP54
Corrosion resistance class CRC[1)]		2

1) Corrosion resistance class 2 to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents

Note

In order to be able to operate a large mass moment of inertia with the rotary indexing tables, they must be equipped with an exhaust air flow control valve.

Calculation of the cycle time

The rotary indexing tables are equipped with a hydraulic shock absorber, which means that the max. frequency of the shock absorber must also be taken into account when calculating the cycle time.

The switching time comprises: Switching time = Unlock, rotate, lock and return stroke of working piston. The cycle time is calculated as follows:
Cycle time = Switching time + Processing time + Dwell time.

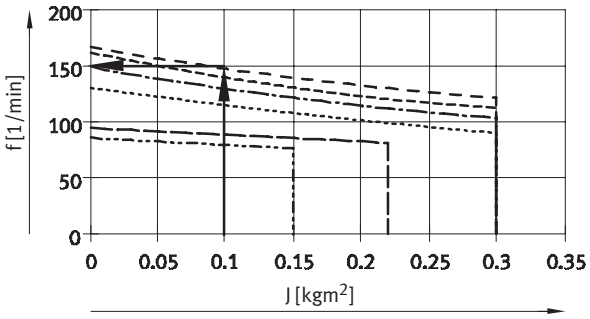
In the switching frequency graph, the max. achievable switching frequency is read in relation to the mass moment of inertia. From this the switching time can be calculated using $T = 60/f$. The processing time is calculated from the time required by the respective customer application (e.g. time for component removal, press-in time, etc.). A dwell time may be necessary if the cycle time is shorter than the min. possible cycle time.

Calculation example

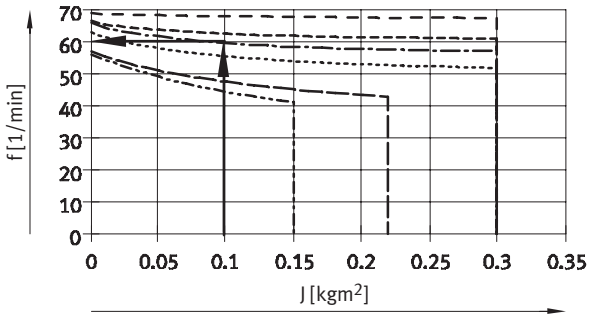
DHTG-140 with 8 stations and a mass moment of inertia of 0.1 kgm^2.

The customer application requires 300 ms per step for the insertion and removal of parts.

Switching frequency in rpm



Max. permissible cycle frequency



$T_{switching\ time} = \frac{1}{f} = \frac{60s}{130} = 0.461s = 461ms$

$T_{min.\ perm.\ cycle\ time} = \frac{60s}{59} = 1.017s = 1017ms$

Dwell time = Min. permissible cycle time – Switching time – Processing time
Dwell time = 1017 ms – 461 ms – 300 ms = 256 ms.

Given the fact that the switching time + processing time is smaller than the min. permissible cycle time, the rotary indexing table must stay in the end position before the next step is performed. In other words, between the switching an additional dwell time of 256 ms must be allowed for in the control sequence.

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!
Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.

9001: CERTCC5-16248-2006-AQ-ESN-TGA
ISO 9001
ISO 14001
DNV
Certified Company
14001: CERTCC5-16248A-2006-AQ-ESN-TGA
