**Accumulator assembly
Type ABSBG**

H/A/D 6170/99

Accumulator assembly type ABSBG-...

Overview of contents**Contents**

	Page
Features	1
Ordering details	2
Symbols	2
Selection table	3
Accumulator assembly kits	4
Unit dimensions	5 to 7
Notes on commissioning, maintenance and operation	8
Engineering guidelines	8

Features

- Accumulator assembly with safety block to DIN 24 552
- Diaphragm or bladder type accumulators
- Safety block with integrated isolator valve, safety valve (design tested) and unloading valve
- Unloading valve optionally with manual or electrical operation
- Glycerine filled pressure gauge with red marking of the maximum relief pressure
- Weld-on brackets

- 1 Hydraulic accumulator
- 2 Safety block with:
 - System isolator valve
 - Pressure relief valve (design tested)
 - Manual unloading
 - Electro-magnetic unloading (version E)
- 3 Pressure gauge with red marking of max. relief pressure
- 4 Space required for testing and charging kit

Port designation:

- M1; M2 – Measuring port
- P – Pump port
- T – Tank port

Notes on commissioning, maintenance and operation

General

- The hydraulic accumulators contained within these assemblies comply with directive 97/23/EC (component directive).
- The assemblies comprise all of the components that are required to conform to the safety requirements laid down in DIN 24 552.
- The assemblies must not be modified, otherwise the warranty becomes void.
- Repairs may only be carried out by the manufacturer or his authorised dealers and subsidiaries. If repair work is carried out by the customer, warranty rights are cancelled.
- The assemblies must be installed, serviced and repaired by authorised, trained and instructed personnel.
- The assemblies must only be operated within the permissible limits.
- The generally valid safety regulations and regulations for the prevention of accidents must be observed.
- National pressure vessels regulations of the country of installation have to be observed.
The country of installation must be stated on the order.

Commissioning

- Before the hydraulic accumulator is commissioned for the first time it must be charged with nitrogen. The gas pre-charge pressure required for operation is specified in hydraulic circuit diagrams and operating instructions.
- For charging, use only suitable charging and testing equipment.

Maintenance

- The gas pre-charge must be checked at regular intervals.
- Loss of the gas pre-charge while the system is continued to be operated results in damage to the accumulator bladder or accumulator diaphragm, respectively. If the accumulator bladder or diaphragm is damaged, the accumulator is immediately inoperable.

 **Caution!**
Warning

- Hydraulic accumulators store energy.
Before carrying out repair work, depressurise the system on the fluid side.
- The accumulator assembly comes with a warning sign. This must be fitted near the accumulator assembly in a clearly visible position.

Notes in accordance with EC Machinery Directive 98/37/EC, Annex II, Section B, manufacturer's declaration:

The assemblies have been manufactured in accordance with the harmonised standards EN 982, EN 983, EN 292 and EN 60 204-1.

Commissioning is strictly prohibited until evidence has been furnished that the machine, into which the assemblies are to be installed, are also in compliance with the regulations of EC Directives.

Engineering notes

Comprehensive notes and suggestions can be found in The Hydraulic Trainer, volume 3 RE 00 281, "Planning Hydraulic Systems".
